

Cure the Fear™

63%

Children report fear before an injection

182 yrs

Since the syringe invention in 1844 - no behavioral solution has existed

MedBuddy® provides child comfort in healthcare. It changes the experience of injections and protects the investment in getting a child the necessary health support.

For context: the cost of a single missed vaccination dose — when accounting for follow-up outreach, community re-engagement, and lost herd immunity contribution — far outweighs the investment in MedBuddy®.

GLOBAL PARTNER INITIATIVE

Every child in the world deserves to be free from the fear of getting an injection.

MedBuddy® is a patented, proven science-based distraction and reward solution to one of the oldest unsolved fears. Needle anxiety is a universal obstacle that often leads to missed healthcare visits and skipped doses of critical medication. The solution in any country or language is MedBuddy, because we care.

Three Ways to Partner

Subsidized Distribution

Fund MedBuddy® units for existing vaccination programs. Flexible procurement: direct, co-financing, or grant-funded.

Co-Branding

Commission culturally specific designs reflecting the animals, stories, and symbols of the communities you serve.

Formal MOU

Structured, long-term partnership defining shared goals, impact metrics, co-branding terms, and mutual commitments.

Let's get MedBuddy® into the hands of every child who needs it.
